Drawing Components: Organize and display commands and commands groups more easily. See the shape of your drawing in a new 3D view, which lets you see not only what's on a page but also what's behind it. Make commands easier to organize in model space and create palettes by drawing a single command to create groups and reorganize any commands in a palette. View Docks and Tabs: Control and present multiple views on a single screen, such as a 2D and 3D view, and snap to scale. Create and manipulate separate tabbed views and add more views with a click. Drag views to your screen, even if you're not using AutoCAD. Drawing Stability: Eliminate jitter in a live drawing by recording information to the drawing. Send a command that records the current drawing state to a drawing file, then pause the command, unpause, and replay the command. AutoCAD automatically redraws the model in the drawing, so you can draw more efficiently than ever. Assemble, Embed, and Layout: Easily place your drawings in your company's Autodesk Corporate Planner. Share drawings and assemble a set of related drawings in a Planner drawing to view and interact with all the elements together, just as you would when assembling an AutoCAD drawing. Embed files in your drawings to interact with those files in AutoCAD as if they were there all the time. Revit: Easily generate interoperable Revit files from AutoCAD drawings, and import them into Revit.
